

Career Services: Secure single contract for UA/MAU site license for web-based career services software.

ESTIMATED ONE-TIME SAVINGS = \$ 2,500+

Supporting Information

Career services software, such as “eCampus Recruiter” allows students to review job postings and internship opportunities, present “secure” resume profiles to potential employers, and makes possible employer access to student resumes in a web-based, “anywhere-anytime,” format. Two MAUs currently own this software. The purchase price is approximately \$2,500, with an additional \$100 in monthly fees. A single UA license may provide for a more cost effective pricing schedule.

UA career services leadership will also explore a system-wide fee for access to “ACKIS,” an online database that provides career “fit” information based on information provided by the student. A system license may make this service more affordable. The current pricing structure is \$750/year/site.

Updates:

- Anticipated Outcome/s: Cost savings TBD; UA-wide career services program emphasis through coordinated database and program coordination.
- Research has been conducted regarding needs and available services/vendors.
- System-wide career services leadership and the SSC will plan next steps in UA contract development and follow up.
